DJIUSD DOW	BUY	53317	4	\$2,133	52795	54600	\$2,088	1 : 2.46			+\$1,308		+0.63R
TOTAL (\$)											+\$1,308	+\$9,447	
TOTAL (R)											+0.63R	+3.93R	

R : R PLANNED is fixed when the trade is placed - target distance divided by stop distance - and is how the setup is judged. R ACHIEVED is what the trade actually returned against the risk taken. They only match when a position runs the full way to target.

PRICE NOW is a live mark while a position is open, so the P/L beside it is unrealised. A price tagged EXIT is an actual close and moves that row into realised. P/L figures are as reported by the broker and can differ from price x volume by the fill, spread and financing.

Figures in red break a rule: risk above 1% of free margin, or a reward to risk under 1:3. Per 1.00 lot, \$1.00 of price movement is worth: XAUUSD \$100 • WTIUSD \$1,000 • XAGUSD \$5,000 • BTCUSD \$1.00 • DJIUSD \$1.00. volume = 1R / (stop distance x that value). R:R must be at least 1:3. Round volume down.
