

TRADING PACKAGE

\$20,000 Account

ACCOUNT	RISK PER TRADE	TRADES PER WEEK	REWARD TARGET
\$20,000	1% = \$200	5	1:3 to 1:5

What will be done

STEP	
	Five trades a week
1	One position on each of the five markets below. Five is a ceiling, not a quota - a week with three good setups is a week with three trades.
	Every trade risks exactly 1%
2	\$200. Position size is calculated from the distance to the stop, so a wider stop means a smaller position, never a bigger loss.
	Stop and target set before entry
3	Both levels are placed with the order. The stop is never widened once the trade is live.
	Nothing taken below 1:3
4	The target must be at least three times the distance to the stop. A \$200 risk is aiming for \$600 to \$1,000.
	Stop moved to entry once it moves
5	When a trade goes far enough in favour, the stop moves to the entry price. From that point the trade cannot lose.
	Everything is logged
6	Each week you receive a sheet showing every entry, stop, target, exit and the profit or loss in cash and in R.

The five markets

XAUUSD Gold	WTIUSD Crude oil	XAGUSD Silver	BTCUSD Bitcoin	DJIUSD Dow Jones 30
-----------------------	----------------------------	-------------------------	--------------------------	-------------------------------

One trade per market per week, so no single market can dominate the account and a bad call in one place stays a \$200 problem.

What a week can look like

Five trades means six possible weeks, from nothing working to everything working. Every outcome is shown - the losing ones included.

TRADES THAT WORK	WINNERS AT 1:3	WITH THE STOP MOVED TO ENTRY
0 of 5	-\$1,000	\$0
1 of 5	-\$200	+\$600
2 of 5	+\$600	+\$1,200
3 of 5	+\$1,400	+\$1,800
4 of 5	+\$2,200	+\$2,400
5 of 5	+\$3,000	+\$3,000

THE POINT OF MOVING THE STOP

In the left column a week where nothing works costs \$1,000 - five stops at 1% each. In the right column, where the stop has been moved to entry, that same week costs nothing. You stop being able to lose a week; you can only fail to make one. Two of five working is enough to be profitable either way.

What you receive

INCLUDED	
Weekly trade sheet	One page, every trade: entry, stop, target, exit, risk taken, and the result in cash and in R. Rule breaches are flagged.
A card per closed trade	Open price, close price, profit in cash and percent - shareable.
A running cycle total	Realised and unrealised kept in separate columns so open profit is never counted as banked.

What is not promised

READ THIS BEFORE ANYTHING ELSE

None of the figures above is a forecast. They are what the arithmetic produces if a given number of trades work - not a claim about how many will. The most that can be lost in a single week under these rules is \$1,000, or 5% of the account, and losing weeks are a normal part of the method rather than a failure of it. Spread, commission and financing are not included and reduce every result. Past performance does not indicate future results.
